## PRESENTACIÓN

La necesidad de elevar los resultados de los estudios de audiencia a valores de población obliga a realizar cada año la actualización del universo de referencia con objeto de no incurrir en la obsolescencia que supondría trabajar estrictamente con datos censales. Los largos periodos entre censos hacen que cada año sea necesaria una nueva estimación del universo a partir de proyecciones demográficas.

AIMC ha venido haciendo esta estimación para aplicarla a los resultados del Estudio General de Medios. Numerosas consultas de sus asociados impulsaron en los últimos años a elaborar y distribuir un documento en el que se recogían los datos principales de dicha estimación. En dichos años se han multiplicado las consultas a AIMC sobre esta materia no solo de asociados sino de otras instituciones que utilizan las estimaciones de AIMC como datos de referencia para otros trabajos. Ello constituye una satisfacción y simultáneamente un compromiso de mejora.

Así, el documento que ahora se presenta con los “Universos del Estudio General de Medios, 2.023”, recoge un análisis más detallado de la población, tanto de la que constituye estrictamente el universo EGM como de la población total, así como información útil sobre el tamaño de los hogares.

Se trata en definitiva de un trabajo de recopilación de los datos de población proporcionados por los organismos públicos competentes, a los que se añaden estimaciones propias, presentados de forma que permitan la aplicación directa, y que AIMC pone a disposición de sus asociados y de la comunidad investigadora en general.

Enero 2.023

# FICHA TÉCNICA

## Fuentes y presentación de resultados

Los datos que se adjuntan constituyen el **marco referencial básico** de población para la investigación EGM 2.023 y resultan de la elaboración que AIMC ha realizado a partir de las siguientes fuentes:

- Padrón municipal Población a 1 de enero de 2.021 - INE.
- Proyecciones de población (2.022 - 2.037) (dato a 1 de enero de 2.023) - INE.
- Proyecciones de hogares (2.022 - 2.037) (dato a 1 de enero de 2.023) - INE.
- Encuesta de Población Activa Trimestre 4/2021 a Trimestre 3/2022 - INE.

Para clasificar los municipios por tamaño de hábitat se ha tenido en cuenta la población que tenían en el Padrón Municipal de 2.021.

Todas las cifras de población consignadas se refieren siempre a población el día 1 de enero de 2.023.

La población objeto de estudio por parte de EGM son los individuos de 14 años o más que residen en la España peninsular, Baleares y Canarias.

Dadas las características de estudio muestral que el EGM tiene, la congruencia entre el tamaño del universo estimado a través del propio estudio y el dato de referencia equivalente consignado en este documento, solo se pretende a niveles globales, de acuerdo con las condiciones de equilibrio utilizadas en el proceso.

## **Metodología**

La estimación para el año 2.023 está basada en las “Proyecciones de Población (2.022-2.037)” que ha realizado el INE.

Los últimos datos publicados de las “Proyecciones de Población (2.022 - 2.037)”, a tiempo para realizar esta estimación, tienen fecha de 13 de octubre de 2.022.

De esta manera disponemos de la cifra de total de población por provincia, sexo y edad año a año.

Para establecer el tamaño de hábitat de cada municipio se considera la cifra de población que proporciona el Padrón municipal de 2.021.

En la distribución de la población por tamaño de hábitat se mantienen las proporciones del Padrón 2.021. Esta estructura de hábitat se aplica al total individuos de cada cruce provincia-sexo. Para la distribución por hábitat de la población de 14 o más años mantenemos la suposición de idéntica distribución por hábitat que el total de la población.

Para establecer la distribución de hogares se ha utilizado un indicador que proporciona el INE: “Proyecciones de hogares (2.022 - 2.037)”, tomando como referencia el dato a 1 de enero de 2.023.

A partir de las respectivas proyecciones de población y de hogares hemos calculado el promedio de individuos por hogar a nivel de cada provincia. A nivel de toda España el promedio de individuos por hogar es de 2,50.

Para el cálculo de la distribución de hogares por tamaño de hogar según los individuos de 14 años o más se ha utilizado la EPA. De esta encuesta disponemos del fichero de datos desagregados con factor de individuo para todos los miembros del hogar, de forma que se puede obtener un factor de hogar para el tamaño de los de 14 años o más. El promedio, a nivel nacional, de individuos de 14 años o más por hogar es de 2,19.
